PROFESSIONAL SUMMARY

Software Architect specialised in international banking: currently at NTT DATA on the joint Santander UK – TSB project, previously modernising platforms for Santander Bank USA. I design distributed and event-driven systems, define API contracts and integration strategies, and plan on-premise and cloud deployments on OpenShift, Kubernetes and AWS with CI/CD, observability and security built into every release. Full architecture profile: from system design and technical decisions to operations, performance and quality in production.

TECHNICAL SKILLS

Architecture: Software architecture, microservices, event-driven architecture (EDA), distributed systems, API First, OpenAPI 3.0, REST, DDD, hexagonal architecture, CQRS, Saga, Outbox, Circuit Breaker, Delegate pattern

Integration and messaging: Event messaging, message queues, publish/subscribe, API Gateway, IBM API Connect, MuleSoft

Cloud and infrastructure: OpenShift, Kubernetes, Docker, on-premise Linux servers, AWS, cloud native, containers, ConfigMaps and Secrets

CI/CD and DevOps: CI/CD, GitHub Actions, Git, SonarQube, Fortify, Trivy, DevSecOps, Linux

Data and performance: PostgreSQL, SQL, NoSQL, MongoDB, Redis, distributed caching, Dynatrace, observability, load testing

Backend development: Java, Spring Boot, Spring Cloud, JUnit, MapStruct, JSON, XML

Artificial intelligence: AI agents, process automation

Methodologies: Scrum, Kanban, Clean Code, SOLID, ADR, technical documentation (UML, Confluence), Jira

PROFESSIONAL EXPERIENCE

Software Architect | NTT DATA · Santander UK – TSB project

May 2026 – Present | Madrid, Spain

- Design, build and maintain common architecture components (shared libraries, base configuration and templates) reused by development teams.
- Upgrade libraries, frameworks and infrastructure: breaking-change and code impact analysis, test plans, phased rollout and rollback.
- Vulnerability analysis and remediation in dependencies and images (SonarQube, Fortify, Trivy) built into the CI/CD pipelines.
- Observability and performance: Dynatrace monitoring, comparative load testing, throughput and latency analysis (p95/p99) and findings reports.
- Distributed caching: configuration and tuning of pools, timeouts and multi-data-centre topology.
- Support and troubleshooting in on-premise environments: access to Linux servers and OpenShift/Kubernetes containers to review logs, configuration and deployments.
- Design distributed and event-driven architectures, with API contracts and the integration strategy between systems.
- Technical governance: standards, design reviews and architecture decision records (ADR).

Software Developer | Delogica · Santander Bank USA project

October 2025 – April 2026 | Madrid, Spain

- Platform modernisation in an international banking environment across the full lifecycle: analysis, design, integration, deployment and quality.
- Analysed legacy MuleSoft systems and produced technical documentation (UML, integration flows in Confluence) as the basis for migration.
- Migrated legacy APIs and integration components to microservices with Java and Spring Boot.
- Designed API First contracts with OpenAPI 3.0 and the Delegate pattern to separate contract from implementation.

- Asynchronous communication through event messaging and queues in event-driven architectures.
- Secure service exposure on IBM API Connect and automated deployment with GitHub Actions to OpenShift (ConfigMaps and Secrets).
- Quality and security in the pipeline: SonarQube, Fortify, Trivy and automated testing with JUnit.
- Integration with relational and NoSQL databases and JSON, XML and CSV data transformation with MapStruct.

Software Developer (internship) | Adviser Cloud

February 2025 – July 2025 | Madrid, Spain

- Built microservices with Java and Spring Boot for internal business applications, using layered architecture and SOLID principles.
- Designed and integrated REST APIs as the communication layer between services and applications.
- Built AI agents to automate internal tasks and workflows.

EDUCATION

Higher Technical Diploma in Cross-Platform Application Development (DAM) | Digitech, Spain

Technical Diploma in Computer Systems and Networks (SMR) | Afuera I, Spain

LANGUAGES

Spanish: native · English: B1-B2 (intermediate)
